## DETAILED ACTION

### ***Response to Arguments***

1. The Applicants' arguments and amendments filed on November 16, 2007 have been fully considered and are persuasive.

### ***Allowable Subject Matter***

2. *Claims 1, 3-6, 8-11, and 13-15* are allowed. The claims indicated include limitations that the prior arts of record do not appear to teach or render obvious, hence they are allowed.
3. The following is an examiner's statement of reasons for allowance:  
As presented in the previous Office Action, Irani (US006993570B1) discloses, *"FIG. 3 illustrates an exemplary network in which a small footprint device running applications/services in the containment framework is connected to a local service-based network. In the example shown, a smart cellular phone utilizing the containment framework is connected to the network. Also shown attached to the network are a printer and an internet-enabled television. In this example, it is assumed that the printer and television devices are operable to export services to a network and possibly use the services of other devices on the network"* (Irani, col.6, line 60 – col.7, line 2). Hence, Irani teaches of small footprint devices (e.g., a smart cellular phone, a printer, and an internet-enabled television) (i.e., Applicants' at least two devices), wherein the printer and television devices are operable to export services to a network and possibly use the

services (i.e., Applicants' collaborative) of other devices on the network. Irani discloses, *"The base layer shown in FIG. 2 is the device hardware layer, which comprises the hardware resources necessary to support a software system, such as a processor and system memory. In one embodiment, the hardware of a small footprint device, such as the small footprint device hardware example illustrated in FIG. 1, implements the hardware layer illustrated in FIG. 2"* (Irani, col.5, lines 25-31). Hence, Irani teaches of the small footprint device (i.e., Applicants' collaborative device) comprising of hardware resources (i.e., Applicants' client device). Irani discloses, "In one embodiment, the containment framework is implemented in a Java application environment as one or more Java classes. As shown in FIG. 2, the Java virtual machine and Java application programming interface (API) class libraries layers are the next layers up from the operating system. These two layers together make up the Java application environment, or Java platform" (Irani, col.5, lines 49-55). Hence, Irani teaches of the small footprint device (i.e., Applicants' collaborative device) comprising of the Java virtual machine (i.e., Applicants' embedded Java server).

Also presented in the previous Office Action, Campbell et al. (US006920615B1) discloses, *"In operation, bundles 112 are installed in OSGi layer 120. The execution of bundles 112 by OSGi layer 120 is supported by Java virtual machine 122 in operating system 124"* (Campbell, col.9, lines 28-30). Hence, Campbell teaches of the OSGi layer 120 (i.e., Applicants' OSGI-compliant), which is supported by Java virtual machine 122 (i.e., Applicants' Java servlets), providing execution of bundles 112 (i.e., Applicants' service bundle). Campbell discloses, *"A centralized connection and distribution point may be used to simplify management and control of devices and services available to a home or business and the Internet. An example is presented illustrating the use of a*

*gateway to provide this centralized connection and distribution point in the context of a premises. The exemplary premises comprises a lamp and a computer, and a human user of both the lamp and the computer"* (Campbell, col.3, lines 5-12). Hence, Campbell teaches of controlling of devices via a centralized connection and distribution point. However, the prior arts of record fail to teach or suggest individually or in combination as stated in the independent claims for *"wherein the predetermined algorithm is dedicated to a particular tertiary relationship, and the predetermined algorithm comprises the further steps of: finding a registry record bearing a set point for the particular tertiary relationship; reading a sensor value of the particular tertiary relationship; comparing the set point and the sensor value, wherein the comparing produces a comparison result; finding, in dependence upon the comparison result, a registry record having an identified capability appropriate to the comparison result for the particular tertiary relationship; effecting the capability identified in the found registry record"* and in combination with other limitations as set forth in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
